

Combined transformations

Exit ticket Name _____

- 1 P (4, 1) is reflected in the x axis, then translated by $\begin{pmatrix} -2 \\ 3 \end{pmatrix}$. Where does it end up?

- 2 A shape is reflected in the line $y = 1$, then in the line $y = 3$. Describe fully the single transformation.

- 3 A shape is rotated 90° anticlockwise about (0, 0), then 180° about (0, 0). Describe fully the single transformation.
