

a Simplify $y + y + y + y$ $4y$ adding a letter to itself	b Simplify $b \times 7$ $7b$ the number goes first	c Simplify $p \times q$ pq two letters multiplied	d Simplify $m \times m$ m^2 a letter times itself
e Simplify $5 \times a \times a$ $5a^2$ a number times a square	f Simplify $x \times y \times x$ x^2y a square and another letter	g Write an expression for m divided by 4 $\frac{m}{4}$ division as a fraction	h Write an expression for: add 2 to n , then multiply by 3 $3(n + 2)$ a bracket from the order of the words
i How many terms does $4a + b - 9$ have? 3 what a term is	j Write down the coefficient of x in $9 - 4x$ -4 a coefficient keeps its sign	k Is $5x - 2$ an expression, an equation or a formula? $expression$ an expression (no equals sign)	l Is $P = 2l + 2w$ an expression, an equation or a formula? $formula$ a formula (it links letters)
