

a Convert 10 miles to km <i>16 km</i> reading a conversion graph	b Convert 24 km to miles <i>15 miles</i> reading it the other way	c Convert 50 miles to km <i>80 km</i> a value past the end of the graph	d Find the cost for 0 hours <i>£20</i> a graph that does not start at 0
e How long is the stop? <i>1 hour</i> a flat line means stopped	f Find the speed on the way out <i>30 km/h</i> speed from a distance time graph	g Find the speed on the way back <i>60 km/h</i> speed on a line going down	h Find the total distance travelled <i>120 km</i> there and back: the total distance
i Which part is the fastest? <i>B</i> the steepest part is the fastest	j Find the speed in km/h <i>30 km/h</i> minutes on the axis, speed in km/h	k When do P and Q meet? <i>after 2 hours</i> where two lines cross	l Is it getting faster or slower? <i>getting faster</i> a curve getting steeper

The Maths Habit
