

a What type of correlation is this?  <i>positive</i> positive correlation	b What type of correlation is this?  <i>negative</i> negative correlation	c What type of correlation is this?  <i>none</i> no correlation	d As x increases, what happens to y?  <i>goes down</i> what a correlation says in words
e Strong or weak correlation?  <i>weak (positive)</i> the strength of a correlation	f Find the outlier's coordinates  <i>(8, 2)</i> an outlier and its coordinates	g Correlation proves one thing causes the other. True or false? <i>false</i> correlation is not causation	h Which line is the line of best fit?  <i>B</i> choosing the line of best fit
i Must a line of best fit go through (0, 0)? <i>No</i> the line need not start at 0	j Estimate y when $x = 6$  <i>5</i> estimating from the line	k Estimate x when $y = 6$  <i>8</i> the estimate turned round	l The data have x values from 1 to 9. Is an estimate of y at $x = 30$ reliable? <i>No, outside the data</i> beyond the data: unreliable
